## Education Outreach Activities (Representative Sample)

- (1) All my courses are available freely online:  
[https://web.williams.edu/Mathematics/sjmillers/public\\_html/](https://web.williams.edu/Mathematics/sjmillers/public_html/).
- (2) Maintain math riddles website, consistently in top ten when googling ‘math riddles’:  
<http://mathriddles.williams.edu/>. This leads to numerous conversations with mathematics educators about using riddles in the classroom. Expanding the site to include material for high school and junior high school teachers and students, receiving over 4000 distinct hits per month.
- (3) Problem editor for Pi Mu Epsilon journal and the American Mathematical Monthly.
- (4) Mentor for the Math Alliance; frequent participant at their Field of Dreams Conferences, where I am often a panelist on careers in academia, and also assist students in applying to Research Experiences for Undergraduate summer programs, and share that information with a network of REU directors.
- (5) Serving on the Mt Greylock Regional School Committee and the Transition Committee. Successfully changed the formula for capital project assessments b/w Lanesborough and Williamstown, which helped get the high school building project passed. Also figured out a way to fairly divide state aid in our full regionalization. Previously had three school districts: an elementary school in each town, and the high school; interestingly this results in FOUR committees! We are now at 1, but we want each town to have control of its elementary school’s budget. Right now about \$3.5 million of the \$21 million budgets of the three schools come from Chapter 70 aid from the state; however, upon regionalizing the state no longer tells us how much goes to each school, as they want us to treat all buildings equally. Doing this means, for the same level of service, Williamstown would pay about \$360,000 more and Lanesborough \$480,000 less for the same services; this would not have passed (nor should it!). I figured out how to well-approximate the state’s hidden formula; my predictions for 2018 were off by less than \$10,000 per school, well within the \$200,000 in additional savings we expect to get.
- (6) For years I have recorded all my classes and posted on YouTube, and have occasionally had students from other schools, alumni, or even Williams students who wanted to take something else at the same time slot as well take my classes remotely. I am working with LACOL (the Liberal Arts Consortium for Online Learning) to modify this program and expand it to include many classes at our schools. I led the first beta test, integrating new technology to have the remote students having as good an experience as possible, and am currently the chair of the sub-group.
- (7) Invited participant: VCTAL - the computational thinking modules (designing modules to be used in high school math classes): (1) a cryptography module to be used in high school classrooms; (2) a module on streaming information; (3) a module on randomness.
- (8) Invited participant: Institute for Mathematics & Education: Mathematicians in Mathematics Education Workshop: March 20-22, 2008 and April 25-27, 2010.
- (9) Frequent speaker at Hampshire College, Ross and PROMYS programs for talented high school students in mathematics, 2004 – present. Often bring my students to mentor them in mentoring, having them talk to the younger students about college in general and math in particular.
- (10) Wrote and reviewed exam questions for the American Mathematics Competitions, 2008 – present.
- (11) Lecturer in the Teachers as Scholars program (2011, 2012, 2013, 2014), where I gave continuing education lectures on (1) cryptography and Benford’s law (2011, 2012) and (2) “a-ha” moments in mathematics for the classroom (2013, 2014), with an emphasis on creating modules for high school / junior high school classes.
- (12) Judge of a math competition at the Berkshire Hills Regional School District (2012).
- (13) Visited and gave lectures at Norwood Middle School in Massachusetts (2012).
- (14) Visited and gave lectures at the Brooks School in North Andover, Massachusetts, and was a one-man visiting committee for their math department (2012).
- (15) Problem editor for Pi Mu Epsilon journal. Mentored undergraduates and graduate students in writing and editing problems. Doing 100 problems for 100 years (to celebrate the 100th anniversary). Wrote many problems for the general problem section.
- (16) Wrote many exam questions for math competitions (especially the Green Chicken and the University of Rochester Math Olympiad), and posted these online as a resource for students.
- (17) Wrote a problem for Math Horizons with Stan Wagon (Self-referential probability, 23:2 (Nov 2015) 30).

- (18) Represented Williams SMALL REU at an REU conference at Mount Holyoke; participated in discussions and served as recording secretary for half the meeting. Also represented SMALL at an REU conference at UMass (and brought 12 of my students).
- (19) Ran a math table at Summer Sundays with several of my students, providing another mentoring opportunity for them and doing an outreach activity for the community. Activities included the mathematics of LEGO bricks (combinatorics, game theory), origami and the Rubik's cube.
- (20) Run numerous undergraduate research sessions at AMS Sectional Meetings and a Joint Meetings.
